

What is Claimed is:

1. A thigh rig, comprising:

a carrier comprising a pad body, having a front side and a rear side, for detachably attaching on a user's body and a pouch panel overlappedly provided on said front side of said pad body to define a storage compartment, for receiving a pistol-like weapon therein, between said pad body and said pouch panel, wherein said storage compartment has a top opening, having a holding portion, formed by a top edge of said pouch panel and said front side of the pad body; and

a quick-attach arrangement comprising a pair of reinforcing elements spacedly provided at said top opening of said storage compartment for selectively adjusting a width of the holding portion of said top opening, so as to securely hold a wrist of said weapon in said storage compartment in position.

2. The thigh rig, as recited in claim 1, wherein each of said reinforcing elements, which is an elongated strap, has an affixing end affixed on said front surface of said pad body and a control portion extended across said top opening of said storage compartment to fasten on said pouch panel for selectively adjust said holding portion of said top opening, so as to tighten said weapon at said wrist thereof.

3. The thigh rig, as recited in claim 2, wherein said quick-attach arrangement further comprises a first fastener provided on an inner side of said control portion of each of said reinforcing elements and a second fastener provided on an outer side of said pouch panel such that said control portion of each of said reinforcing elements is adapted to securely attach on said pouch panel by detachably fastening said first fastener with said second fastener.

4. The thigh rig, as recited in claim 1, wherein said carrier further comprises a shielding flap, having a predetermined size and shape, is overlappedly extended from said pad body for enclosing said top opening of said storage compartment so as to cover a butt of said weapon

5. The thigh rig, as recited in claim 3, wherein said carrier further comprises a shielding flap, having a predetermined size and shape, is overlappedly extended from said pad body for enclosing said top opening of said storage compartment so as to cover a butt of said weapon.

5 6. The thigh rig, as recited in claim 5, wherein said carrier further a securing unit which comprises a first and second securing straps extended from said pouch panel and said shielding flap respectively, a buckle plug provided at a free end of said first securing strap, and a corresponding buckle socket provided at a free end of said second securing strap, so that said shielding flap is adapted for substantially protecting said
10 weapon by detachably buckling up said buckle plug and said buckle socket.

7. The thigh rig, as recited in claim 5, wherein said pouch panel, having a triangular shaped, has two side edges firmly affixed on said front side of said pad body to from said storage compartment which has a cross section area gradually reducing from a top portion to a bottom portion thereof.

15 8. The thigh rig, as recited in claim 3, wherein said carrier further comprises a shielding flap, having a predetermined size and shape, is overlappedly extended from said pad body for enclosing said top opening of said storage compartment so as to cover a butt of said weapon.

20 9. The thigh rig, as recited in claim 8, wherein said carrier further a securing unit which comprises a first and second securing straps extended from said pouch panel and said shielding flap respectively, a buckle plug provided at a free end of said first securing strap, and a corresponding buckle socket provided at a free end of said second securing strap, so that said shielding flap is adapted for substantially protecting said weapon by detachably buckling up said buckle plug and said buckle socket.

25 10. The thigh rig, as recited in claim 8, wherein said pouch panel, having a triangular shaped, has two side edges firmly affixed on said front side of said pad body to from said storage compartment which has a cross section area gradually reducing from a top portion to a bottom portion thereof.

30 11. The thigh rig, as recited in claim 2, wherein said top edge of said pouch panel has a curved shape gradually descending from a mid-portion of said top edge to

two side edges thereof, so as to enhance a retention of weapon in said storage compartment.

12. The thigh rig, as recited in claim 3, wherein said top edge of said pouch panel has a curved shape gradually descending from a mid-portion of said top edge to two side edges thereof, so as to enhance a retention of weapon in said storage compartment.

13. The thigh rig, as recited in claim 8, wherein said top edge of said pouch panel has a curved shape gradually descending from a mid-portion of said top edge to two side edges thereof, so as to enhance a retention of weapon in said storage compartment.

14. The thigh rig, as recited in claim 2, wherein said carrier further comprises a belt hanger, which is upwardly extended from a top edge of said pad body, comprising an elongated durable belt having an affixing end affixed to said pad body and a free end, wherein said belt hanger is formed by folding said durable belt overlappedly to form a hanging loop, a pair of fasteners being provided at said affixing end portion and said free end portion of said durable belt such that said free end portion of said durable belt is adapted to detachably attach to said affixing end portion thereof to form said hanging loop by attaching said pair of fasteners with each other.

15. The thigh rig, as recited in claim 8, wherein said carrier further comprises a belt hanger, which is upwardly extended from a top edge of said pad body, comprising an elongated durable belt having an affixing end affixed to said pad body and a free end, wherein said belt hanger is formed by folding said durable belt overlappedly to form a hanging loop, a pair of fasteners being provided at said affixing end portion and said free end portion of said durable belt such that said free end portion of said durable belt is adapted to detachably attach to said affixing end portion thereof to form said hanging loop by attaching said pair of fasteners with each other.

16. The thigh rig, as recited in claim 2, wherein said carrier further comprises two leg straps affixed to two opposed side edges of said pad body, wherein a leg buckle plug and a leg buckle socket are provided at free ends of said two leg straps respectively and detachably connected with each other, so that said carrier is adapted for firmly

mounting on a thigh of said user by wrapping said leg straps around said thigh of said user and buckling up said leg buckle plug and said leg buckle socket.

17. The thigh rig, as recited in claim 8, wherein said carrier further comprises two leg straps affixed to two opposed side edges of said pad body, wherein a leg buckle
5 plug and a leg buckle socket are provided at free ends of said two leg straps respectively and detachably connected with each other, so that said carrier is adapted for firmly mounting on a thigh of said user by wrapping said leg straps around said thigh of said user and buckling up said leg buckle plug and said leg buckle socket.

18. The thigh rig, as recited in claim 15, wherein said carrier further comprises
10 two leg straps affixed to two opposed side edges of said pad body, wherein a leg buckle plug and a leg buckle socket are provided at free ends of said two leg straps respectively and detachably connected with each other, so that said carrier is adapted for firmly mounting on a thigh of said user by wrapping said leg straps around said thigh of said user and buckling up said leg buckle plug and said leg buckle socket.
